MEMORANDUM FOR: DDS&T

25X1A

25X1A

1. Prior to going over to the other side of the river to identify the antennas, I checked with some Communications and Security people. I learned from [REDACTED] (OS) that the DCI had tasked the Deputy Director of Support several days ago with the same project. DDS has spent a considerable number of man hours to identify the locations of eight to ten antennas in the vicinity of the building. One of them is currently under construction and is a new UHF station.

2. The Director of Security will deliver a briefing to the DCI on Friday morning. This will include the identity and location of the antennas and their direction with respect to the building, frequencies, ownership and other pertinent details. The Office of Security will make this report available to us for our comments on Friday (after it gets to the DCI).

3. In addition to the new UHF station there is a Western Union tower at Tenley Circle; a tower at Tysons Corner; WETA, Arlington; WTOP, WRC and WTTG. There are others and I can continue to investigate if you wish and attempt to provide similar information gathered up by DDS.
